

(a) Sparse contour input

endocardial and epicardial rings
on the acquired SAX planes

each point carries (x, y, z) , a tissue
label and the phase (ED or ES)

— endocardium

— epicardium

(b) Contour encoder

(c) Implicit decoder

(d) Coupled fields and surfaces

$$f_{\text{epi}}(x) = f_{\text{endo}}(x) - \delta(x)$$

the strictly positive offset keeps the
epicardium outside the endocardium

zero level sets meshed on a 96^3 grid
